Introducing techniques for making pop-ups from one sheet of card, the third title in this series on paper engineering takes folding techniques into the third

dimension. Each chapter introduces a new technical idea and shows how that technique can be adapted in many different ways, or combined with techniques from earlier chapters. These 3-D techniques can be incorporated into any design where typography and/or illustration are used, including mail-shots, personal publicity, invitations, business cards and greetings

cards. With their emphasis on surface design over complex cutting, the pop-ups have an instant appeal for designers. Following the elegant, easy-to-follow style of Paul Jackson's other titles for Laurence King, *Cut and Fold Techniques for Pop-Up Designs* is an essential resource for marketing professionals and design students. Formats/Experimental Packaging combines two highly successful titles from the same series. Experimental Formats examines the shape and size of the designed page and reveals how decisions made at this initial stage of the design process have a huge impact on the finished design. Today with so much information being projected through screen in a conventional horizontal

format, it is appealing to see shapes that are more unusual and more stimulating. Provides examples of how contemporary designers are pushing the boundaries in this area and explores exciting questions such as how to make a book that does not look like a book. Experimental Packaging features examples by designers who break all the conventional rules by creating

unique pieces of structural art. New concepts are illustrated with templates and diagrams. There are ten templates included, adaptable for use with some of the unusual materials featured in the book. The Graphic Design Reference & Specification Book
John Wiley & Sons
Unlike other packaging titles, which

simply provide templates to copy, this book enables designers of all packaging types to create 3-D packaging forms that are specific to their needs rather than based on an existing design. It teaches a simple 'net' construction system - a one-piece 2-D configuration of card seen when a 3-D package is opened out and flattened - which enables the designer to create a huge number of

very strong 3-D packaging forms that are both practical and imaginative. Each chapter concludes with photographs and net drawings of 6–10 creative examples of packaging designs made using the principles outlined in the preceding chapter. *Structural Packaging* gives the reader an understanding of the underlying principles of packaging construction and the

technical knowledge and confidence to develop a greater number of their own unusual and innovative designs than any comparable book.
